The Brand of Electricity

LONDON OUTLET WITH FUSE AND LED INDICATOR WHITE

Electrical cable outlets with built-in fuses and LED indicators are commonly known as "fused connection units with indicator." These types of outlets are designed to provide extra safety and often have a fuse incorporated into the unit to protect against overcurrent or short-circuit conditions, as well as an LED indicator to provide visual feedback on the outlet's status. They offer added safety and convenience by incorporating a fuse to protect against electrical faults and an LED indicator to easily identify the status of the power supply. Installation should be performed by a qualified electrician to ensure proper electrical safety and compliance with UK regulations.

[ADVANTAGES »](#)

- Quick and easy installation
- High quality and reliability
- Elegant design

[PRODUCT INFORMATION »](#)

- Rated current (A): 13A
- Nominal voltage (V): 220V
